NSU Florida

# A brief biography

## Experience in Academia

- Oct 2022-Present: Nova Southeastern University
- Director of Pharmacy Development and Reader in Pharmacy, University of Bedfordshire, Aug 2020-2022
- Senior Lecturer, School of Life Sciences, University of Sussex, 2015-2020
- Lecturer, Medway School of Pharmacy, University of Kent, 2005-2015
- Research Fellow, Liverpool John Moores University, 2003-2005
- Visiting scientist at University College London 2001
- Assisstant/Associate Professor at Tabriz Faculty of Pharmacy, 1997-2003

## Education:

- Pharmacy Doctorate, Tabriz Faculty of Pharmacy, 1992
- PhD in Pharmaceutical sciences, Liverpool John Moores University, 1996
- Postgraduate Certificate in Higher Education, University of Kent, 2008

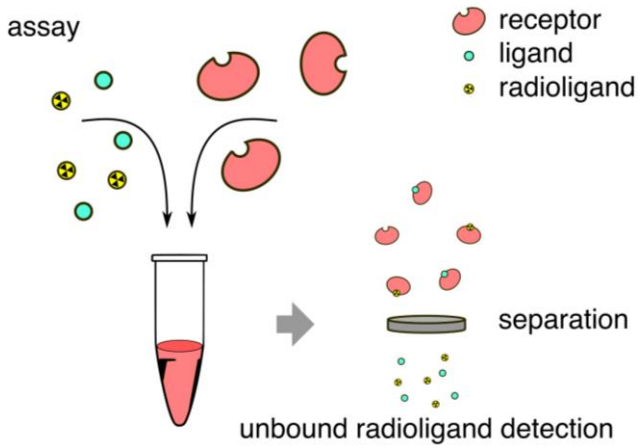
Computer-aided drug discovery has been around for decades

A recent surge in embracing computational technology

# Scientific models in pharmaceutical sciences

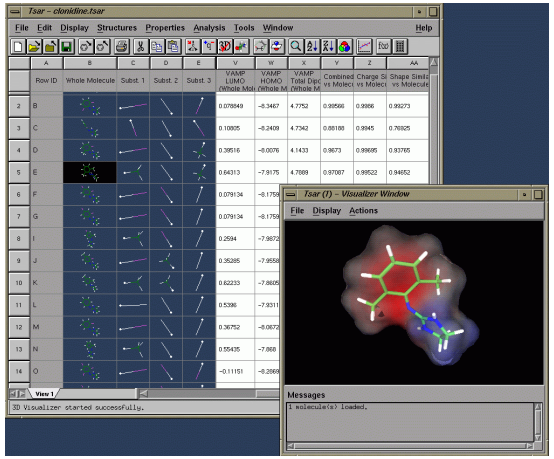
*In vitro models*



*Animal models*

*Clinical trials: clinical models of the real patient population*

*Computational models*



*Hypothetical example: efficacy of an antidepressant in a tablet dosage form*

# *All we do in science is modeling*

"... the sciences do not try to explain, they hardly even try to interpret, **they mainly make models**. By a model is meant **a mathematical construct** which, with the addition of certain **verbal interpretations**, describes observed phenomena. **The justification of such a mathematical construct is solely and precisely that it is expected to work—that is, correctly to describe phenomena** from a reasonably wide area."

John von Neumann

# Computational modelling:

The use of computers to simulate and study complex systems using mathematics, physics, and computer science. A computational model contains numerous variables that characterize the system being studied. Simulation is done by adjusting the variables alone or in combination and observing the outcomes. Computer modeling allows scientists to conduct thousands of simulated experiments by computer.

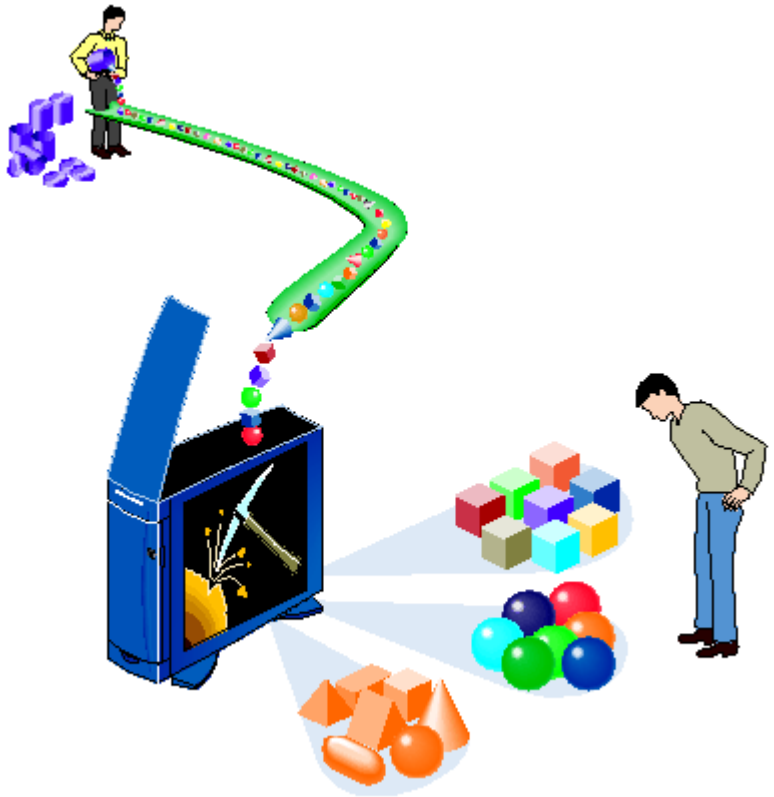
# AI and ML (Artificial Intelligence and Machine Learning)

*ML discovers patterns in **data** so that this knowledge can be applied to enable future predictions*



- Specific AI (weak AI) is engineered to execute a specific task, the most prevalent form of AI today
- Universal AI (strong AI) can comprehend, learn, and apply intelligence across a variety of tasks
- Superhuman AI: hypothetical, a topic of debate and research.
- ML is the tool used in AI: creating algorithms that learn from data and make predictions:
  - Supervised learning, Unsupervised learning, Reinforcement learning
  - Neural networks: an MI algorithm to identify patterns in data by simulating the brain's processing methods. Deep learning, employs complex, multilayered neural networks to perform these tasks.

# Data Modelling (Machine Learning)

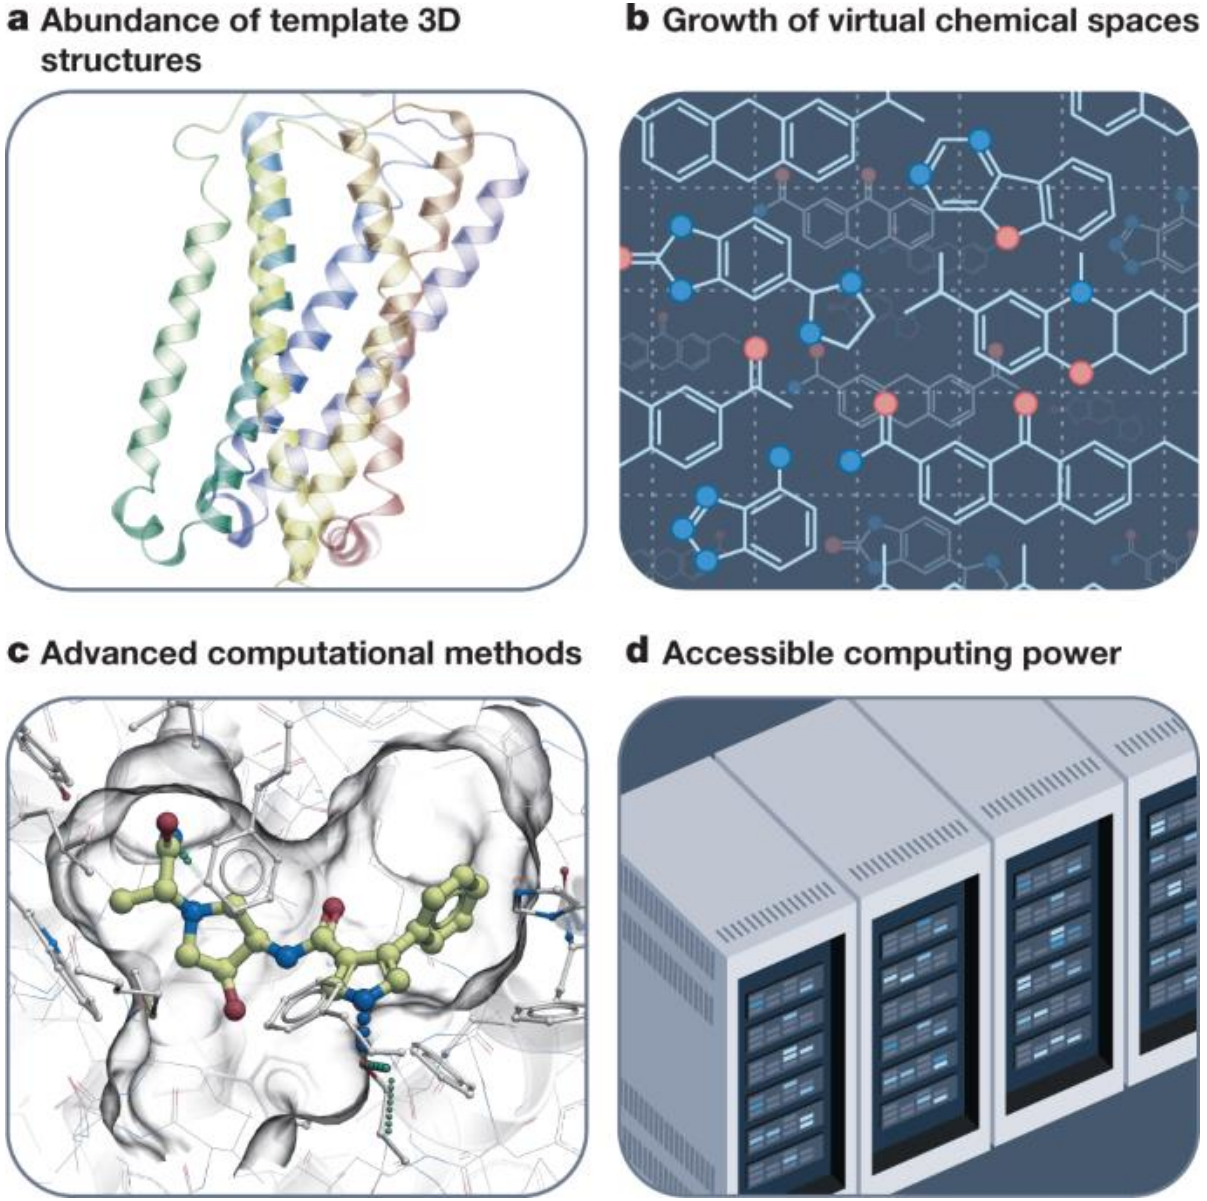
# FDA Modernization Act 2.0

As part of the Omnibus Bill signed in Dec 2022 by President Biden, the act eliminates the requirement to conduct animal testing before human trials

- Opportunities for alternatives to animal testing

# Progress in Computational modelling for Drug Discovery

- The flood of data on ligands and their binding to targets
- the 3D structures of proteins (PDB has 200K proteins, **AlphaFold** can predict the 3D model)
- abundant computing capacities
- on-demand virtual libraries of billions of drug-like molecules ($3 \times 10^{10}$ on-demand compounds in 2022)
- deep learning predictions of ligand properties and target activities

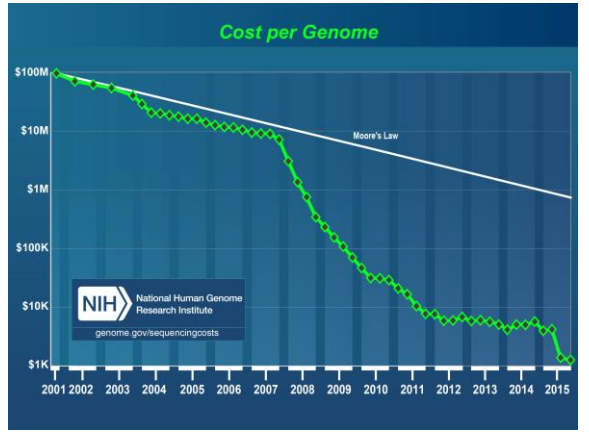


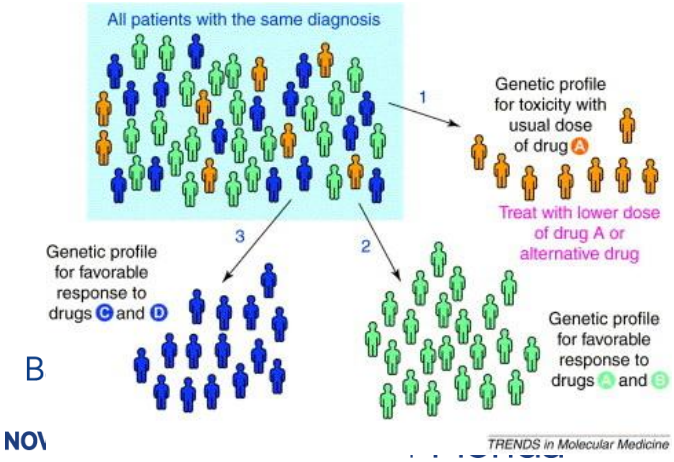
presenting new opportunities for the cost-effective development of drugs; democratizing the drug discovery process

https://www.nature.com/articles/s41586-

# Impact of New ”Revolutionary” Technologies on Drug Discovery and development

- High-throughput automated chemistry: microwave-assisted and flow chemistry, combinatorial chemistry
- Gene chips, genomics and sequencing and now CRISPR/Cas9 for gene editing
- Omics tools
- High-throughput screening & assays: 3D-cell cultures, Organ-on-Chip, in vitro ADME/Tox
- Progress in tissue engineering and organ on a chip
- Bioinformatics & Molecular biology tools
- Biomedical Databases: bioactivity, protein distribution, differential gene expression, network pharmacology
- Longitudinal observational data
- Virtual screening and library design and Docking
- …. and now AI





# Databases: Big Data

- Chemical data and drug data

## Aspirin

**Summary** **Aspirin** is a salicylate used to treat pain, fever, inflammation, migraines major adverse cardiovascular events.

**Brand Names** *Aggrenox, Alka-seltzer, Alka-seltzer Fruit Chews, Anacin, Arthriten Inflar cor Aspir-low Bayer Aspirin Bayer Womens Bc Arthritis Bc Original Fc*

**Generic Name** Acetylsalicylic acid
Commonly known or available as Aspirin

**DrugBank Accession Number**

**Background** Also known as *Aspirin*, acetylsalicylic acid (ASA) is a commonly used dr pain and fever due to various causes. Acetylsalicylic acid has both anti- antipyretic effects. This drug also inhibits platelet aggregation and is u blood clots stroke, and myocardial infarction (MI) [Label].

Interestingly, the results of various studies have demonstrated that lor acetylsalicylic acid may decrease the risk of various cancers, including

biobank uk
Enabling scientific discoveries that improve human health

Enable your research | Explore your participation | Learn more about UK Biobank

UK Biobank is a large-scale biomedical database and research resource, containing in-depth genetic and health information from half a million UK participants. The database is regularly augmented with additional data and is globally accessible to approved researchers undertaking vital research into the most common and life-threatening diseases. It is a major contributor to the advancement of modern medicine and treatment and has enabled many scientific discoveries that improve human health.

## Alzheimer's Disease Neuroimaging Initiative

The Alzheimer's Disease Neuroimaging Initiative (ADNI) seeks to develop biomarkers of the disease and advance the understanding of AD pathophysiology, improve diagnostic methods for early detection of AD and improve clinical trial design. Additional goals are examining the rate of progress for both mild cognitive impairment and Alzheimer's disease, as well as building a large repository of clinical and imaging data.

# Molecular modelling software capabilities

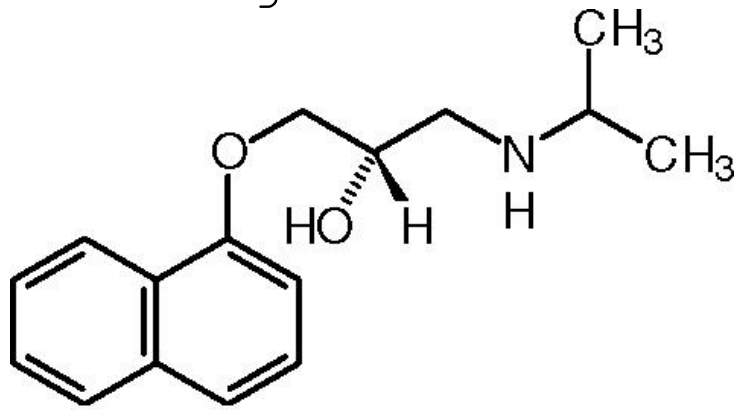
Model or mimic the behavior of molecules using computational chemistry for drug design

Molecular graphics

Perform theoretical chemistry calculations (forcefield or quantum mechanics)

interactive molecular drawing and

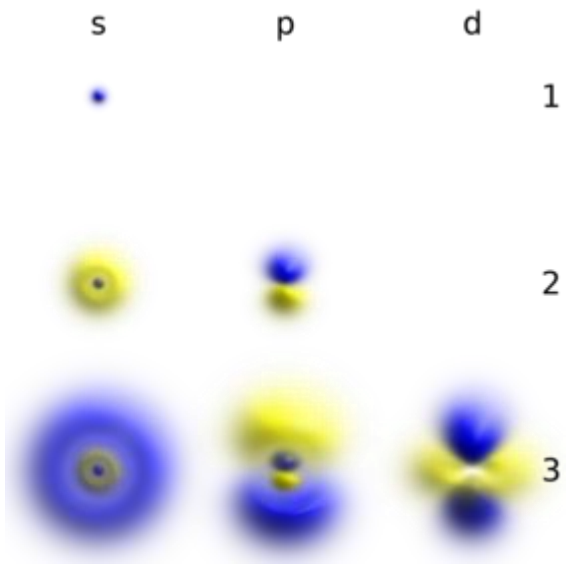
The software recognizes the molecular structures in a chemically meaningful way, *i.e.*: Not just a graph, but a chemical entity



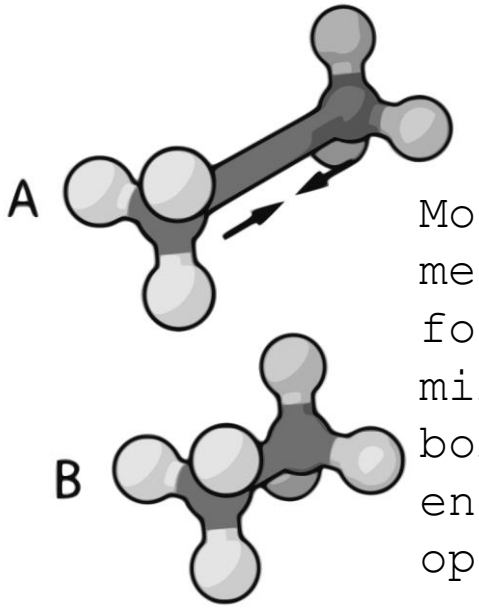
(*S*)-form

# Molecular modelling

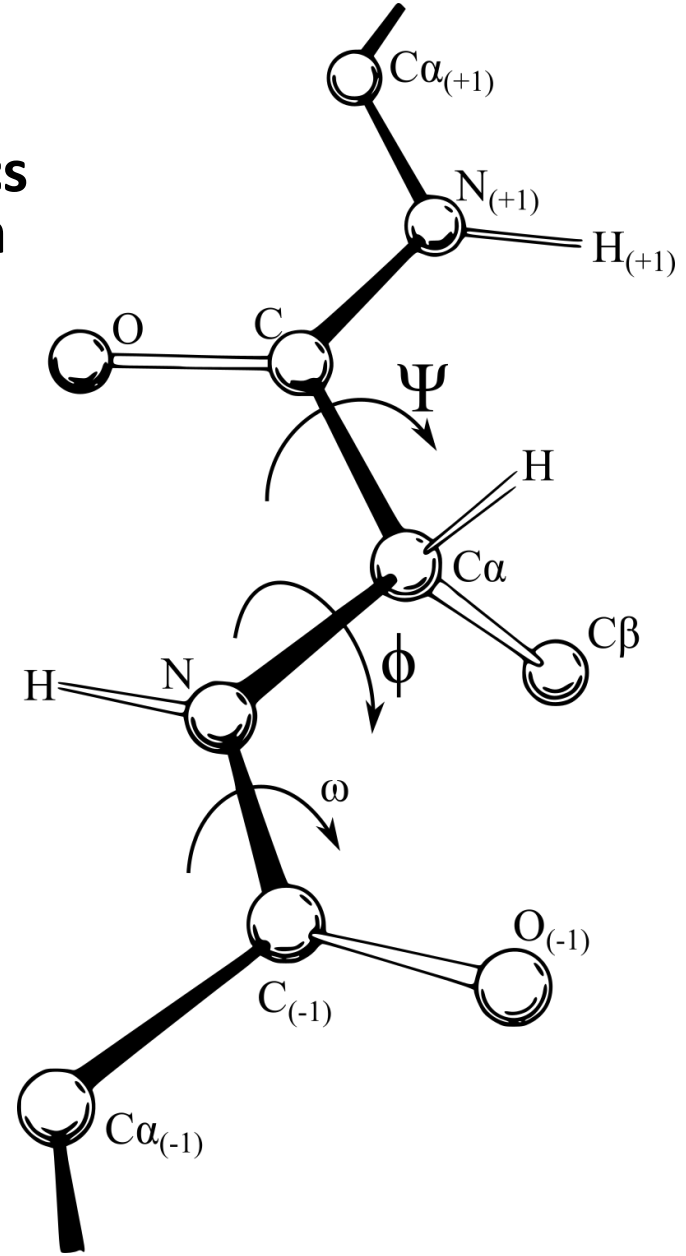
- They may treat atoms as the smallest unit (a **molecular mechanics** approach), or model protons, neutrons and electrons (a **quantum chemistry** approach)
- Methods that take advantage of data are winning as we get more data and more compute! Hence Machine Learning methods for molecular simulations (Amin, Raja, Krishnapriyan, 2025)



Probability densities of the wave functions of an electron in hydrogen atom



Molecular mechanics uses a force field to minimize the bond stretching energy and optimize angles.

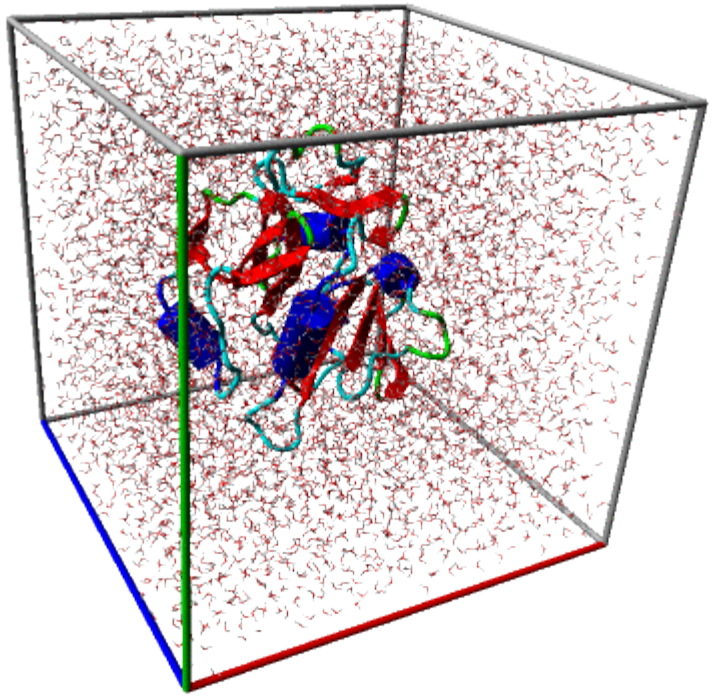


Barry and Judy Silverman College of Pharmacy
NOVA SOUTHEASTERN UNIVERSITY | NSU Florida

# Molecular modelling empowered by AI

- More accurate behavior is captured with:
  - Large scale simulations
  - Longer time scales

- Use available data to train AI models, one trained prediction cheap



Towards Fast, Specialized Machine Learning Force Fields: Distilling Foundation Models via Energy Hessians - Atomsbysics Data System

# Protein–ligand docking for virtual screening to identify hits

- Predict binding geometry of drugs to target proteins and interaction energy.
- Available software AutoDock and AutoDock Vina, rDock, FlexAID, Molecular Operating Environment, and Glide.
- Available compound libraries ($10^9$ compounds with fingerprints, molecular descriptors, etc)
- Accelerated docking protocols are necessary: the protein-ligand docking results between the prepared receptors and compounds are used to build ML data-frames for each binding site.

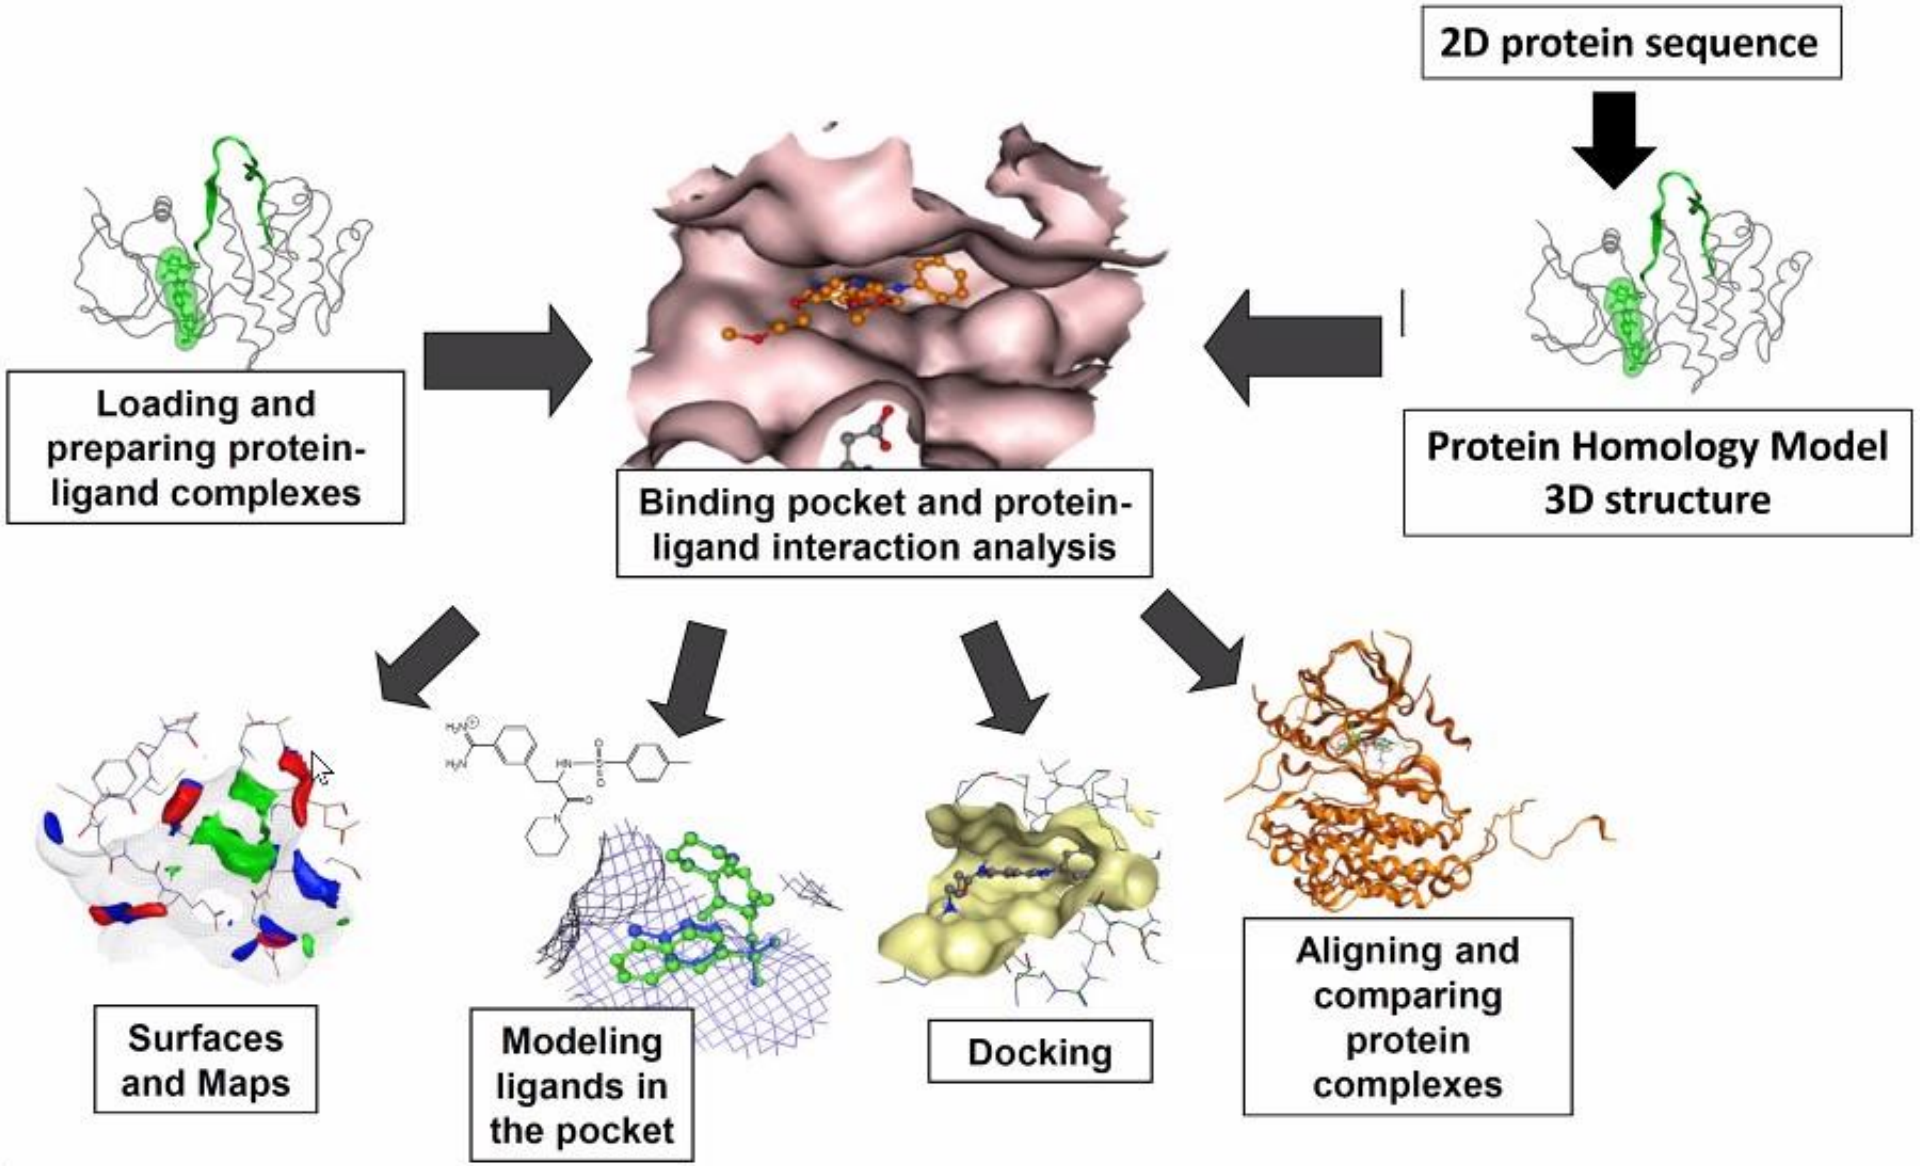
# Typical Structure-Based Drug Design (SBDD) Workflows



# Protein data bank

1. Protein Databank has the 3D structure of proteins **https://www.rcsb.org**
2. Various resolutions and accuracy

# AI in Protein Folding: AlphaFold

- The problem of predicting protein folding from amino acid sequences a grand challenge (Nobel Laureate Christian Anfinsen in 1972)
- A biennial competition called Critical Assessment of Protein Structure Prediction (CASP) was launched in 1994 to encourage efforts around the protein folding problem
- DeepMind, a UK-based AI company now part of Alphabet Inc developed a neural network model named AlphaFold which was trained on known protein structures in the protein data bank (PDB) and won the 14th CASP competition with remarkably accurate predictions within error of experiments.

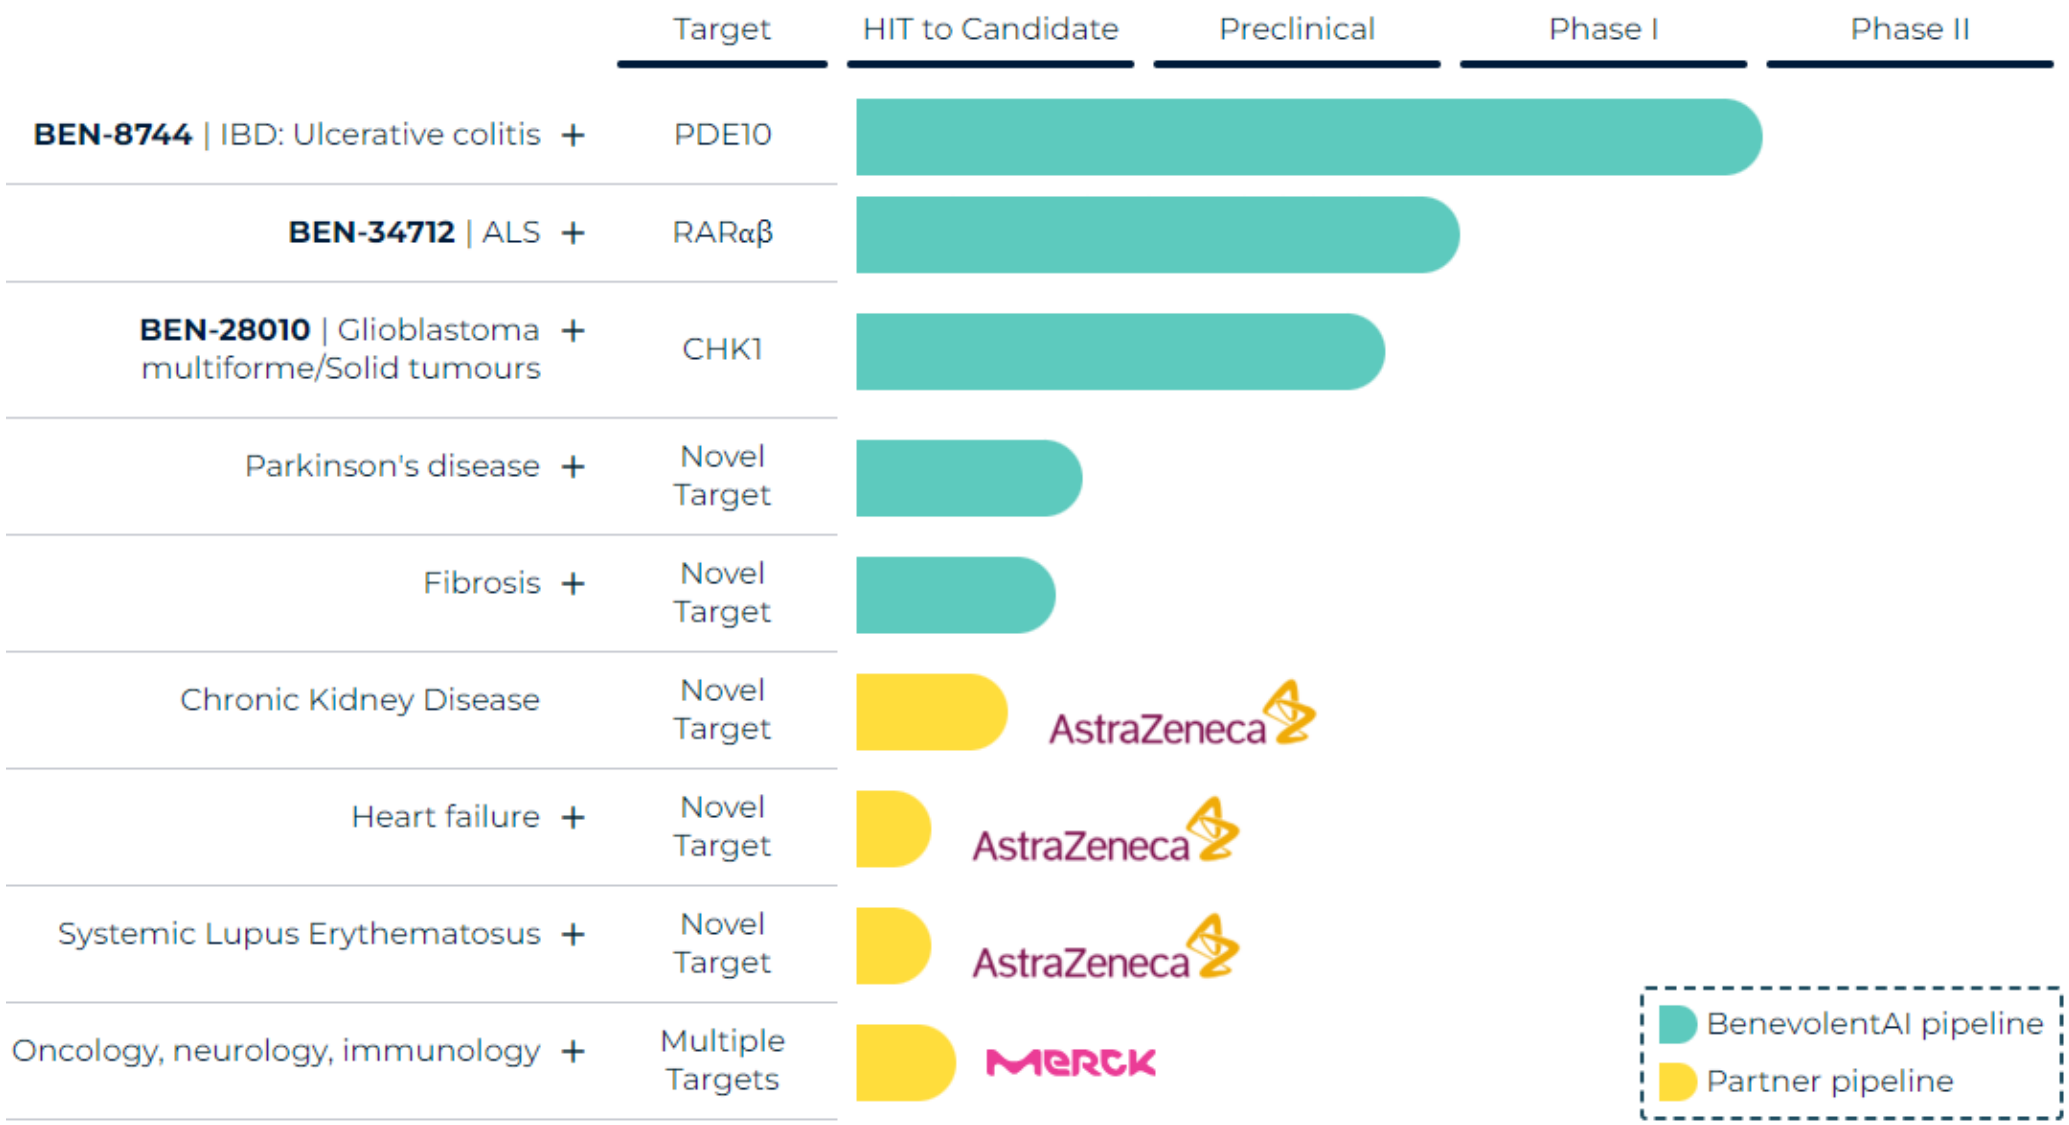
# BenevolentAI drug pipeline



*Retrieved: Feb, 2025*

# Example AI system in the Pharmaceutical Industry

- R2E (Retrieve to Explain) system combines AI-driven information retrieval (scientific literature, genomics, and clinical information) with explainable predictions to prioritize drug targets

# Conclusion

- AI can enable wider accessibility of drug discovery to smaller, minimally funded entities (democratization of drug discovery)
- Researchers and start-ups can benefit greatly within the competitive market of the pharmaceutical industry.
- A scientist and a health professional of the future will need to be able to operate the AI systems (prompt engineering etc), if not build them!
- Complex machine-learning algorithms may grow in the future, for example, by incorporating biological/clinical data into AI models for personalized dosing and precision medicine.
- The prediction quality of AI models, including their accuracy, generalizability, reliability, and interpretability, is a major consideration, especially when used for regulatory purposes (e.g., FDA submissions) and clinical decision-making.
- The black-box nature of AI systems hinders their
